

Dear Sixth Grade Families,

*HMH Science Dimensions™* is our new program that is designed to make this year of science an exciting one for everyone involved! Together we will take a fresh look at science through investigations, hands-on labs, and explorations into topics including engineering, Earth science, and space science.

Each unit contains in-depth lessons that let students explore a variety of concepts related to the topic of study. These units and lessons include projects, hands-on labs, activities, and engineering challenges that provide your student opportunities to step away from their books or computers and actively participate in their learning.

*HMH Science Dimensions™* will help your student build a foundation for how to evaluate evidence, make valid claims, develop reasoning skills, and synthesize information from a variety of sources. Let's explore these dimensions of science together!

Sincerely,

*Mrs. Jones*
